

FEDERAL OCCUPATIONAL HEALTH

Job Hazard Analysis Services

Federal Occupational Health (FOH) has a long and successful history of serving federal agencies with their health and safety needs. Every worker should be as safe as he or she can be. Job hazard analysis (JHA) identifies and analyzes those hazards associated with the performance of various individual job tasks. The goal is to make each worker as safe as possible.

The intent of JHA is identifying necessary training, equipment, and monitoring to safely perform job tasks in accordance with applicable workplace safety regulations. FOH's Environmental Health and Safety Services (EHSS) can help provide a thorough JHA program that can contribute to reduced workplace injuries, incidents, and related lost worker time and productivity.

The JHA provides findings and recommendations associated with each job task. Findings may include recommendations for personal protective equipment (PPE) and other protective measures, such as foot and eye protection, protective hearing devices (earplugs, muffs), hard hats, respirators, gloves, and full body suits. Specific operating procedures are recorded on the JHA analysis forms.

Hazard Analysis

Hazard identification is essential for maintaining the safety and health of employees. Environmental contaminants, physical hazards, as well as water- and food-borne hazards, must be properly identified so that personnel can perform their jobs safely.

FOH's EHSS professionals will perform inspections, identify hazards, and assist with their control. FOH support services include:

- PPE determination, training and supplies
- Air quality monitoring
- Food safety inspections
- Water quality inspections

As hazards are detected and identified, FOH staff will ensure that management and employees receive targeted and general safety briefings, unique to each situation or hazardous condition. Safety training topics may include:

- General hazard awareness
- Confined spaces
- Hazardous atmospheres
- Hazardous exposure (e.g., hazardous liquids and solids)
- Energized areas (e.g., electric wires or cables)
- Respiratory protection (e.g., asbestos, silica dust)
- Water- and food-borne hazards

What are the benefits?

- **Experienced laboratory analysts** skilled in analytical support services
- **Compliant** with Occupational Safety and Health Administration (OSHA) and Environmental Protection Agency (EPA) mandates
- **Simple and flexible** service delivery method using the Interagency Agreement (IAA)

"FOH enables our agency to have expert consultants whose excellent support helps us more efficiently manage our activities, improving the safety and health of Americans."

Director,
National Institute for Occupational Health
and Safety (NIOSH)

Fast Facts

- FOH is one of the largest providers of environmental health and safety services for federal agencies.
- FOH has close to 70 years of experience serving federal employees.
- During disasters, FOH provides industrial hygiene assessments and collects samples to characterize potential environmental exposures.
